

More delivery capacity, with expert review intact

For a managing partner deciding whether to investigate: if senior people keep reconstructing evidence, correcting repeat omissions or chasing engagement follow-through, more drafting output may leave the constraint untouched. Build n Bloom examines one repeated delivery step before proposing a system.

What they do

Build n Bloom installs one AI-assisted workflow inside a service your firm already sells. Your method is the starting point; your specialists retain professional decisions and client sign-off. They scope, configure, test and hand over the agreed workflow.

Two ways to check the work

The [public-source review](#) traces a finding to a published government survey and shows why the figures cannot establish a pilot-to-production conversion rate. The report and checking worksheet are open to inspect.

The [working demonstration](#) lets you change fictional handover records, inspect the resulting gaps and approve or hold the finding. It runs local rules, not live AI. These show source checking and a bounded review mechanism; neither establishes client results or increased delivery capacity.

The cost of finding out

A free 25-minute call compares what might be holding up one repeated part of your delivery and agrees a practical next check — possibly a process change, better use of existing tools, or further investigation. No preparation or confidential files needed.

If paid design work is justified, the **System Blueprint is US\$3,500**: one workflow, boundaries, baseline, acceptance examples and a costed go/no-go recommendation. It is a planning deliverable, and a supported recommendation to defer or not install is a valid result. Installation is scoped and priced separately. The Blueprint carries a [Decision Guarantee](#) covering material failure against agreed written criteria, not business outcomes.

The decision

Choose one service we sell repeatedly and one step that regularly returns to senior people. Is it worth comparing the possible causes in a free 25-minute conversation? [Choose a time](#), or [read the free pack](#) first.
